Volume 1, Issue 1

Spring 2002

Formwork for new foundations are being formed.

Construction is under way at Harbor High

First phase includes new classroom building

After months of discussion and collaboration with students, staff, faculty and consulting groups, construction is

under way on three new buildings at Harbor High School. The new buildings will provide an administration building, a multi-use building and a classroom building.

Beverly Prior Architects have responded to the school's concerns about the division of students on campus due to the natural geography of the site. The placement of the new buildings is key to integrating the campus that currently is split into two distinct levels - an upper and lower level.

The new administration building is located at the entrance to the campus and will provide a clear focal point. The multi-use building will provide a full service kitchen which will serve a population of 1150 students. The new classroom building, with eight additional classrooms, will replace portable classrooms.

Extensive site work will provide stairways, pathways and gathering areas, including a new quad at the center of campus. All of these improvements are key to unifying the campus, providing ADA access and harmonizing functions and services.

Construction will continue through the summer months and in to the next school year. This new construction phase is scheduled for completion in February 2003. At the completion of the new construction phase, Harbor High School will move into the modernization phase of improvements. During the modernization phase, the existing buildings will receive ADA upgrades, new power distribution, updated communication and alarm systems. The scheduled completion for all improvements Spring 2003.

"We are very excited about the progress being made. The contractors are great to work with..."
